The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   133851 151236: contig of 17386 bp in

```

NOTICE: This sequence may not be the entire insert of this clone. It may be shorter because we only sequence overlapping sections once, or longer because we provide a small overlap between neighboring submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one m13 subclone.

## NEIGHBORING COSMID INFORMATION:

This is a segment of the YAC Y58G8, sequenced to span the gap between R02C2 and F33E11. The 5' clone is R02C2, 3100 bp overlap; 3' clone is F33E11, 200 bp overlap. Actual start of this YAC is at base position 20847 of CELDC2; actual end is at 7365 of CELT22H9.

Sequence fidelity from base pair 6911 to base pair 9100 can not be guaranteed due to a tandem repeat. This region may contain misassemblies, single cloned areas, or regions of low quality.

## NOT THE

Coding sequences below are predicted from computer analysis, using the program Genefinder(P. Green and L. Hillier, ms in preparation)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one Mi3 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em: EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        requests: clonerequest@sanger.ac.uk
On Jul 19, 2001 this sequence version replaced gi:14329623.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping
                                                                                                                                                                          IMPORTANT: This sequence is not the entire insert of clone RP11-320P15 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap.

The true left end of clone RP11-100E6 is at 36226 in this sequence. The true right end of clone RP1-23916 is at 2000 in this sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence was finished as described unless otherwise noted: all
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Submitted (18-JUL-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 29 aaccctgatgacctaat 45
                                                                                                                                                                                                                             (URL, http://www.sanger.ac.uk/Projects/S_pombe/)
During 1995 to 1996 about 66% of S. pombe chromosome 1 was
sequenced by the Sanger Centre. The sequencing of the S. pombe
genome is now being continued with funding from The European
Commission. Fourteen European sequencing laboratories, including
the Sanger Centre, are participating in the project.
Protein coding regions (CDS) have been predicted with the help of
computer analysis using the Genefinder program in PomBase (an ACEDB
database) with additional predictions for the branch-acceptor sites
supplied by the program Sp3splice. CAUTION: It is possible that for

(complementary strand).
The more significant matches with motifs in the PROSITE are also included but some of these may be fortuitous.
The length in codons is given for each CDS.
                                                                                                number of introns/exons or we may not have chosen the correct splice donor/acceptor sites.
CDS are numbered using the following system eg SPBC25H2.0lc. (pombe), B (chromosome 2), c25H2 (cosmid name), .01 (first CDS)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  sequencing project, Sanger Centre, The Wellcome Trust Genome Campus, Hinxton, Cambridge CB10 ISA, E-mail: barrellesanger.ac.uk and Unite de Biochimie Physiologique, Universite Catholique de Louvain, Place Croix du Sud 2/20, B-1348 Louvain-la-Neuve, Belgium

                                                                                                                                                                                                                                                                         sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced.
                                                                                                                                                                                                       will be sequenced to completion. In the event th

Genes with similarity to proteins in the databases are described in

product or 'note' qualifiers. Genes that have no significant

protein similarity are described as 'unknown protein'.

The software programs used to predict genes include: Grail

(Informatics Group, Oak Ridge National Laboratory,

http://compilo.ornl.gov/Grail-1.3/),

BENSCAN (Chris Burge, MIT, http://ccR-081.mit.edu/GENSCAN.html),

RetGene2 (S.M. Hebsgaard, et al., CBS, Technical University of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NOTE: This record contains 80 individual sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            overlap relationships among clones to be deduced. However, it should not be assumed that this clone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  However, it should not be assumed that that will be sequenced to completion.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                will be sequenced to completion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       the record

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  NOTE: This record contains 80 individual sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           However, it should not be assumed that this clone will be sequenced to completion. In the event that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 overlap relationships among clones to be deduced.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Called human colon cancer antigens, given in AAB53234 to AAB54006. The called human colon cancer antigens, given in AAB53234 to AAB54006. The chuman colon cancer antigens can have cytostatic, cardioactive, muscular; neuroprotective, immunomodulatory, gynaecological, gastrointestinal, cultivative, and cancer antigen polynucleotides, and cancer antigen polynucleotides, and concer antigen polynucleotides, and concer antigen polynucleotides, cultivative, such as colon cancer. The cultivative and antibodies to the proteins are useful for the prevention, cultivative that antiquosis of colon disorders, such as colon cancer. The colon concerning the proteins are useful for the proteins are useful for the proteins cultivative disorders, muscular disorders, reproductive disorders, immune cultivative disorders, infectious cultivative disorders, infectious cultivation, and candiovascular disorders. AAC98764 to AAC98772 and AAB54007 represent sequences used in the exemplification of the present concerning the proteins are used in the exemplification of the present concerning the proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match
